

CR Number: 4965
External Reference: SAFER CR 1612
Category: SAFER XML
Component: SAFER/CVISN
Synopsis: Develop a new transaction for ISS scores
Status: Closed Disapproved
Disposition: [2006-04-19] Closed deleted.
Description: CVISN users have requested a separate output transaction that would consist of at least the following data fields:

DOT Number
ISS Score
ISS update date

More data can be added to suit the user's need.

The ISS data is currently part of the MCMIS transaction (T0031). Each record consists of over 100 data elements. Having a transaction specific to ISS data will help to reduce the size of download and processing time.

The ISS transaction will be developed in a way that will help to improve the timeliness of the data to the end users.

[2007-03-16] Presented and discussed at the 3/15/07 ACCB meeting.

Chris Campbell said that this CR was written to help address the problem experienced by WA with delayed receipt of ISS scores. Chris suggested that SAFESTAT values be included in this transaction as well, if they are in sync with the ISS scores. Gary DeRusha noted that PRISM uses the "target indicator" and "MCSIP Step" instead of the ISS score to decide whom to inspect. He questioned why CVISN states do not use the target indicator. Bill Guiffre asked whether this new transaction was just a work-around for the download speed problem and whether it would be needed if the real problem was fixed. This CR will be posted to the CVISN System Architect's list serv for comment from other states, and the ISS issue will be addressed at the CVISN Deployment Workshop.

[2007-04-19] Presented and discussed at the 4/19/07 ACCB meeting.

This is a workaround for the ISS Score. It was created in February when the MCMIS transfer had significant delays. Since the focus is to get the data in a timely manner, if SAFER CR 1613 to improve MCMIS processes is implemented, this would resolve the issue with ISS data. CR was withdrawn by WA.
