Category:

Component: SAFER/Web Services

Synopsis: Add Intrastate SafeStat data to ISS carrier refresh

Status: Recommended

Disposition: [2006-07-26]Recommended for FMCSA ECCB approval

Description: The ISS development team requested to include intrastate SafeStat data into ISS to support the single carrier refresh snapshot and monthly database refresh.

SAFER needs to be enhanced to receive the intrastate SafeStat score from A&I and store in newly added columns in SAFER database. The ISS snapshot Web services maintained by SAFER will be modified to include the intrastate SafeStat score. It was determined that the intrastate SafeStat score currently is stored in MCMIS work tables and is being updated after each regular SafeStat run.

ISS development team will need to modify the monthly database refresh routine to receive the intrastate SafeStat score.

The SAFER team will need to develop a script to extract data via database link to MCMIS and load into the SAFER database.

[2006-07-26] Discussed at the 7/20/06 ACCB meeting.

Intrastate ISS values are calculated monthly with the SafeStat runs, but are not currently posted in MCMIS production or to SAFER. Currently, these intrastate carriers have their ISS values listed in SAFER as "Insufficient Data" (when, in fact, they could have many inspections). This proposal would begin to populate the intrastate SafeStat and ISS values to SAFER and include an additional indicator to indicate that these values are based on the intrastate SafeStat results. This will involve a change to the T0031 MCMIS Census and Safety output transaction. The current proposed change will add the value "N" to the list of possible values for the Indicator field.
