**Category:** SAFER

**Component:**

**Synopsis:** Implement capability to process Unified Carrier Registration (UCR) information

**Status:** New

**Disposition:** [2006-11-21] Open pending further analysis and discussion.

**Description:** Summary:

Unified Carrier Registration (UCR) is being established to replace the Single State Registration System (SSRS). The FMCSA program office has committed to the UCR board to provide a capability to store the states' UCR registration fee into a centralized application and to display the UCR registration status to the roadside. The current recommendation is to leverage SAFER's architecture to store the UCR information and display to the roadside via Query Central and ISS. According to the requirement, SAFER needs to implement an input transaction using web service technology to process the UCR data uploaded from states and store it in the SAFER database.

Volpe will need to provide interface control documentation and to implement a certification process with states' UCR systems.

The next step will be for the staff to discuss requirements with the UCR board. This is expected to happen before the end of November 2006. It has not yet been determined whether this change would involve a change to an existing XML transaction or creation of a new transaction type.
