

**CR Number:** 4965

**External Reference:** SAFER CR 1612

**Category:** SAFER XML

**Component:** SAFER/CVISN

**Synopsis:** Develop a new transaction for ISS scores

**Status:** Open

**Disposition:** [2007-03-16] Open for 30-day review.

**Description:** CVISN users have requested a separate output transaction that would consist of at least the following data fields:

DOT Number  
ISS Score  
ISS update date

More data can be added to suit the user's need.

The ISS data is currently part of the MCMIS transaction (T0031). Each record consists of over 100 data elements. Having a transaction specific to ISS data will help to reduce the size of download and processing time.

The ISS transaction will be developed in a way that will help to improve the timeliness of the data to the end users.

[2007-03-16] Presented and discussed at the 3/15/07 ACCB meeting.

Chris Campbell said that this CR was written to help address the problem experienced by WA with delayed receipt of ISS scores. Chris suggested that SAFESTAT values be included in this transaction as well, if they are in sync with the ISS scores. Gary DeRusha noted that PRISM uses the "target indicator" and "MCSIP Step" instead of the ISS score to decide whom to inspect. He questioned why CVISN states do not use the target indicator. Bill Guiffre asked whether this new transaction was just a work-around for the download speed problem and whether it would be needed if the real problem was fixed. This CR will be posted to the CVISN System Architect's list serv for comment from other states, and the ISS issue will be addressed at the CVISN Deployment Workshop.
